# Acutis UltraDetect™ Enhanced Sensitivity Presumptive Screen

Screening before confirmation is necessary, but the industry-standard screen fails.

- ✗ **The problem with traditional industry drug screens**
  - Outdated cutoff thresholds miss clinically relevant drug use.
  - Limited cross-reactivity means some drugs aren't detected at all.
  - False positives erode trust and damage therapeutic relationships.
  
- ✓ **The solution with Acutis UltraDetect™**
  - Proprietary technology, clinically effective.
  - Our advanced screening platform solves a critical industry-wide problem: unreliable EIA presumptive screening.

## Comparative Detection: Standard EIA vs. Acutis UltraDetect™

**Benzodiazepines 46%**  
are unreliably detected due to poor cross-reactivity

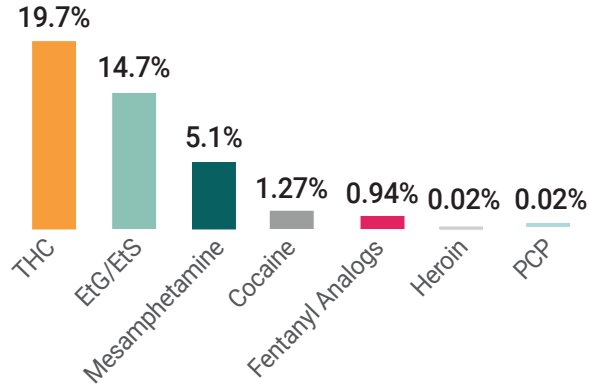

**Cocaine 32%**  
of samples are between 50 ng/mL and 150 ng/mL  
- levels missed by EIA screens  
but detected by Acutis UltraDetect™

## Illicit and Recreational Drugs

Positivity rate for illicit and recreational drugs within the pain medicine setting.

## Suboxone

Illicit substance usage patterns among patients receiving Suboxone for drug recovery.

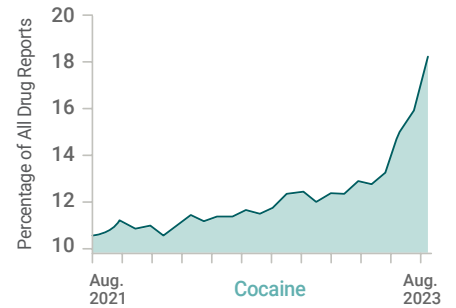

## Cocaine

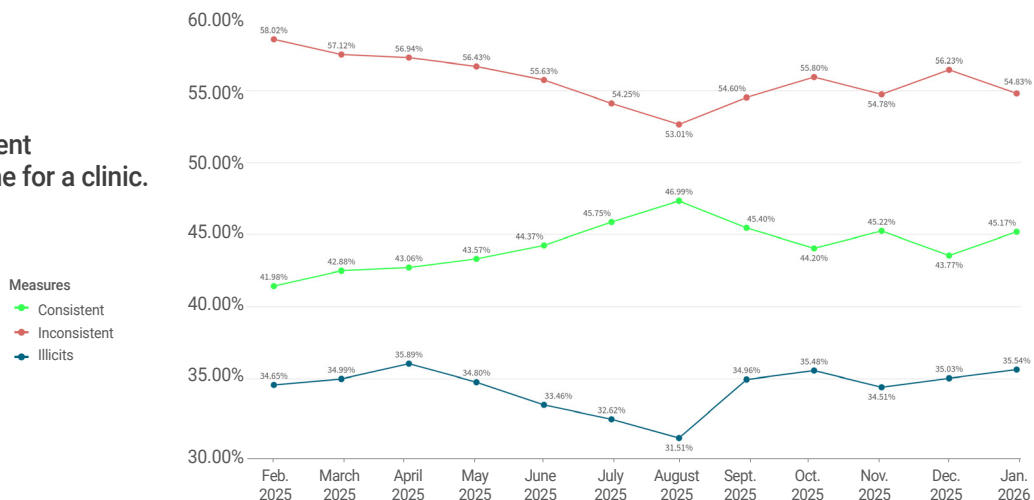

9% of samples tested by Acutis are positive for cocaine.

National statistics indicate a sharp increase in use over the trailing 24 months.
